CLAIM AMENDMENTS

| .1 | 1. (Currently Amended) An air flow control system comprising, |
|----|--|
| 2 | a lightweight headgear structure, |
| 3 | a fan mounted to said headgear structure to generate air flow around |
| 4 | said headgear structure, |
| 5 | a power supply connected to supply power to said fan, |
| 6 | air flow monitoring means mounted to said headgear structure to |
| 7 | monitor the air flow adjacent to said headgear structure, and |
| 8 | indicia means connected with said air flow monitoring means to provide |
| 9 | an indication of a predetermined operating condition thereof. |
| 1 | 2. (Cancelled) |
| 1 | 3. (Currently Amended) The system recited in claim 1 wherein, |
| 2 | said air flow monitoring-system means is a mechanical apparatus. |
| 1 | 4. (Currently Amended) The system recited in claim 1 wherein, |
| 2 | said air flow monitoring system means is an electrical apparatus. |
| 1 | 5. (Original) The system recited in claim 1 wherein, |
| 2 | said power supply comprises a battery. |
| 1 | 6. (Original) The system recited in claim 1 including, |
| 2 | a shroud adapted for covering said headgear structure. |
| 1 | 7. (Cancelled) |

| 1 | 8. (Currently Amended) The system recited in claim 7 claim 3 wherein, |
|---|---|
| 2 | said first indicia means comprises a first light emitting diode. |
| 1 | 9. (Cancelled) |
| 1 | 10. (Currently Amended) The system recited in claim 9 claim 4 wherein, |
| 2 | said-second indicia means comprises a second light emitting diode. |
| 1 | 11. (Original) The system recited in claim 3 wherein, |
| 2 | said air flow monitoring means includes a pivotally mounted arm which |
| 3 | is selectively positioned by an air flow around said headgear structure. |
| 1 | 12. (Currently Amended) The system recited in claim 11 including, |
| 2 | a reference magnet mounted to said headgear structure adjacent to |
| 3 | said arm, |
| 4 | a positioning magnet mounted on-said arm and adapted to interact with |
| 5 | said positioning <u>reference</u> magnet to locate said arm. |
| 1 | 13. (Currently Amended) The system recited in claim 12 including. |
| 2 | a Hall-effect device mounted on said headgear structure, |
| 3 | a sensing magnet mounted on said arm to selectively alter the |
| 4 | operation of said Hall-effect device as a function of the position of said arm. |
| 1 | 14. (Original) The system recited in claim 4 wherein, |
| 2 | said air flow monitoring system includes a current sensing device for |
| 3 | determining the amount of current supplied to said fan. |

17Fi

| | 1 | 15. (Currently amended) The system recited in claim 14 including, |
|----------|---|--|
| | 2 | voltage regulator means for supplying a relatively fixed voltage to said |
| | 3 | current sensing device, and |
| | 4 | a sensing circuit connected to said current sensing means device for |
| | 5 | detecting an excessive current in said current sensing mean. |
| | 1 | 16. (Original) The system recited in claim 15 wherein, |
| | 2 | said sensing circuit includes an operational amplifier. |
| | 1 | 17. (Currently Amended) The system recited in-claim 3 claim 4 including, |
| | 2 | a voltage detect detecting circuit connected to-a said power supply to |
| | 3 | detect the output level therefrom. |
| | 1 | 18. (Currently amended) The system recited in claim 4 wherein, |
| | 2 | said air flow monitoring system means includes |
| <u> </u> | 3 | a voltage sensing device for determining the amount of voltage supplied |
| | 4 | to said fan. |
| - | 1 | 19. (Original) The system recited in claim 18 including, |
| • • | 2 | a current controlling means for supplying a relatively fixed current to |
| ٠, | 3 | said voltage sensing device. |
| | 1 | 20. (Original) The system recited in claim 5 including, |
| | 2 | a battery voltage monitoring means to monitor the voltage level |
| | 3 | produced by said battery. |
| | | |

•

.

| | A / |
|------|--|
| . 1. | 21. (New) An air flow control system comprising, |
| 2 | a lightweight headgear structure, |
| 3 | a fan mounted to said headgear structure to generate air flow around |
| 4 | said headgear structure, |
| 5 | a power supply connected to supply power to said fan to produce air |
| 6 | flow adjacent to said headgear structure, |
| 7 | air flow monitoring means, |
| 8 | said air flow monitoring means including a mechanical apparatus |
| 9 | mounted to said headgear structure to monitor the air flow adjacent to said headgear |
| 10 | structure and an electrical apparatus to monitor the operation of said fan and the |
| 11 | airflow produced thereby, and |
| 12 | first and second indicia means connected with said air flow monitoring |
| 13 | means to provide an indication of a predetermined operating condition thereof |
| 14 | relative to the airflow adjacent to said headgear structure. |
| 1 | 22. (New) The system recited in claim 21 wherein, |
| . 2 | said power supply comprises a battery. |
| 1 | 23. (New) The system recited in claim 22 including, |
| 2 | a battery voltage monitoring means to monitor the voltage level |
| 3 | produced by said battery. |
| 1 | 24. (New) The system recited in claim 21 wherein, |
| 2 | said first and second indicia means each comprises a light emitting |
| 3 | diode. |

| | 1 / | 25. (New) The system recited in claim 21 wherein, |
|---|-----|--|
| | 2 | said first indicia means is connected to said mechanical apparatus to |
| | 3 | provide an indication of a predetermined operating condition thereof. |
| | 1 | 26. (New) The system recited in claim 21 wherein, |
| | 2 | said second indicia means is connected to said power supply to provide |
| | 3 | an indication of a predetermined operating condition thereof. |
| | 1 | 27. (New) The system recited in claim 21 wherein, |
| | 2 | said mechanical apparatus of said air flow monitoring means includes a |
| | | |
| | 3 | pivotally mounted arm which is selectively positioned by an air flow around said |
| | 4 | headgear structure. |
| | 1 | 28. (New) The system recited in claim 27 including, |
| • | 2 | a reference magnet mounted to said headgear structure adjacent to |
| * | 3 | said pivotally mounted arm, and |
| | 4 | a positioning magnet mounted on said arm and adapted to interact with |
| | .5 | said reference magnet to locate said arm. |
| | 1 | 29. (New) The system recited in claim 28 including. |
| - | 2 | a Hall-effect device mounted on said headgear structure, |
| | 3 | a sensing magnet mounted on said arm to selectively alter the |
| | 4 | operation of said Hall-effect device as a function of the position of said arm. |
| | | |

| 1 | 30. (New) The system recited in claim 21 wherein, |
|---|--|
| 2 | said electrical apparatus of said air flow monitoring means includes a |
| 3 | current sensing device for determining the amount of current supplied to said fan. |
| 1 | 31. (New) The system recited in claim 30 including, |
| 2 | voltage regulator means for supplying a relatively fixed voltage to said |
| 3 | current sensing device, and |
| 4 | a sensing circuit connected to said current sensing device for detecting |
| 5 | an excessive current in said current sensing mean. |
| 1 | 32. (New) The system recited in claim 31 wherein, |
| 2 | said sensing circuit includes an operational amplifier. |
| 1 | 33. (New) The system recited in claim 21 wherein, |
| 2 | said electrical apparatus of said air flow monitoring means includes |
| 3 | a voltage sensing device for determining the amount of voltage supplied |
| 4 | to said fan. |
| 1 | 34. (New) The system recited in claim 33 including, |
| 2 | a current controlling means for supplying a relatively fixed current to |
| 3 | said voltage sensing device |
